

5	Recursive Plant Model Identification in Open Loop
5.1	Recursive Identification in the Context of System Identification
5.2	Structure of Recursive Parameter Estimation Algorithms
5.3	Identification Methods (Type I)
5.3.1	Recursive Least Squares
5.3.2	Extended Least Squares
5.3.3	Output Error with Extended Prediction Model
5.3.4	Recursive Maximum Likelihood
5.3.5	Generalized Least Squares
5.4	Validation of the Models Identified with Type I Methods
5.5	Identification Methods (Type II)
5.5.1	Output Error with Fixed Compensator
5.5.2	Output Error with Adjustable Compensator
5.5.3	Filtered Output Error
5.5.4	Instrumental Variable with Auxiliary Model
5.6	Validation of the Models Identified with Type II Methods
5.7	Selection of the Pseudo Random Binary Sequence
5.7.1	Pseudo Random Binary Sequences
5.8	Model Order Selection
5.8.1	A Practical Approach for Model Order Selection
5.8.2	Direct Order Estimation from Data
5.9	An Example: Identification of a Flexible Transmission
5.10	Concluding Remarks
5.11	Problems
